**PROBLEM**
Blockchain technology is not being used to its full potential, but speculative demand is hampering development. So far, projects have been unable to create favorable ecosystems. Cryptocurrency is too volatile and unstable to be used in the mass market. Current projects are in wide demand only in the shadow economy.

**THE ECOSYSTEM CONSISTS OF THE FOLLOWING SERVICES:**
- A crypto bank: able to issue virtual cards with multicurrency wallets
- An exchange where cryptocurrency and fiat money can be changed instantly
- A variety of business services combining work systems for users
- Fintech partners and data centers to store payment history
- Its own blockchain for financial transactions, data storage, clearing and business

**PRODUCT AND ECOSYSTEM**
The FOTON product is a complete LIGHTNET ecosystem based on its own LIGHT and LIGHT SECURE blockchain – Utility today, StableCoin for holders tomorrow.

The project is designed to bring blockchain into the open and create a business model on blockchain principles. Stable-tokens for every business and audience for settlements and financial reporting. Acquiring functions and other services for business. A full-fledged cryptobank of the future.
